

## Reverie

The Reverie offers well balanced overall presentation: good low bass and treble extension, good resolution and neutrality. The Reverie is designed to offer the highest price-to-performance ratio among the STEALTH loudspeaker cables

The Reverie loudspeaker cables set consist of two identical cables, each of which 48 individually insulated conductive strands, per cable (24 per each positive and negative runs)

Only one cable of the pair is shown at the picture

These conductive strands are divided into 6 wire bundles, with extra insulation between the bundles

The wire bundles are wrapped around a STEALTH para-vacuum core (flexible thin wall tubing filled with Helium)

The conductive material is our proprietary copper-based alloy (roughly 90% copper)

The additives to the alloy (silver and molybdenum) allow us to achieve the correct tonality which we feel would be impossible to offer using just plain copper

Each pair of Reveries used Solid Silver Spades as terminal connectors

Handmade in the USA
